Wyleless launches Porthos – The Gateway to a connected world

Wyleless, the leading Global Network Enabler (GNE) today announced the launch of its next generation SAAS-based management platform, Porthos.

Rami Avidan, CEO of Wyleless stated: "Porthos has been built with the experience that we have gained with our customers and partners from earlier unrivalled Wyleless Management Platforms that for years have enabled our customers and partners to achieve global real-time control and visibility of their network and connected devices, with the flexibility to provide new services to their customers across 120 countries."

Jean-Christophe Alt, ABB Robotics, said: "We like the existing Wyleless Management Platform and are looking forward to the new version and the additional functionality that we were involved in defining."

Rami Avidan continued: "Talking with our customers and partners was key to building the next-generation management platform. They were already benefiting from the existing Wyleless Management Platform with its many patented features including Fixed IP connectivity and security across multiple Tier 1, Global Mobile Operators. So the challenge was to improve the user experience and add new features and functions that would help them manage and grow their business more easily and quickly."

The powerful "dashboard" in Porthos gives real-time visibility to the users of their connected world. Among its many cutting-edge features the following can be found:

- Automated Provisioning

- Set and receive alerts and alarms
- Activate and deactivate SIMs
- Manage network configurations and parameters
- Integration of this unique functionality into existing applications using the Wyleless API
- Run real-time Reports
- Billing capability to enable control of billing and viewing invoices
- White label the platform i.e. "M2M platform in a box".

Rami continued, "With Porthos and its "white label" capabilities, we are essentially offering our customers and partners a "GNE in a box", giving them the ability to become a GNE and essentially offer the Wyleless services to their customers and partners without the cost and complexity of implementing a managed global wireless network. The partnership of the wireless systems and network management will give customers and partners a "one-stop-M2M-shop" that enables online management and automated provisioning of assets quickly and easily, removing the complexities of system configuration and substantially improving time-to-market for the customer."

Rami concluded, "Porthos is the gateway to a connected world. It enables our customers to implement a truly open and managed intelligent network, with a dramatically lower TCO and a rapidly increased ROI. This innovation illustrates our dedication to making wireless M2M connectivity an achievable and manageable business tool that can be deployed globally."
